

ASNO 加盟国メンバーに向けた survey の依頼

My name is Shlomit Yust Katz and I am a neuro-oncologist from Israel. I am part of the SNO wellness committee.

We are performing a survey about Grief among neuro-oncology health care providers.

As you know, working in neuro-oncology can be challenging, as patients are often grappling with deadly disease and significant neurological symptoms, for which healthcare providers may experience grief.

To date, no tools have been created that specifically evaluate grief in healthcare providers, and the burden of grief among those working in neuro-oncology has not yet been explored.

To evaluate the impact of grief experienced by neuro-oncology healthcare providers, a novel survey, the Neuro-Oncology Grief Index (NOGI) was created. This survey, adapted from the previously validated Texas Revised Grief Inventory Scale and the Brief-Cope questionnaire, has been created to assess grief and coping behaviors used by those working in neuro-oncology.

We will be grateful if you consider distributing this survey through ASNO.

Please find below a link to the survey.

Many thanks
